

# Angle Measurements

Work in groups of three to five people.

1. Cut out the square, and then cut along each line.
2. Label all the angles in the pieces. Choose any angle and label it angle *A*. Then choose any other angle and label it angle *B*. Continue until all the angles are labeled.
3. Begin with angle *A*. Compare all the angles in your group labeled angle *A*. Decide which is the largest angle. That person scores 1 point. In the event of a tie, each person with the largest angle scores 1 point.
4. Then compare all the angles *B*, then all the angles *C*, and so on. Continue comparing angles until all angles have been compared.
5. The winner is the person with the most points
